Sample Scanned Document for OCR Testing

Document ID: OCR-TEST-2026-001
Date: 25 April 2026
Prepared for: Text Extraction Quality Check

This page is intentionally designed to look like a scanned document. It contains dummy business text, numbers, a small table, and a simple embedded image. The purpose is to test whether an OCR or document extraction system can detect text accurately, preserve reading order, and identify visual content on a single page PDF.

Key Fields to Extract

Client Name: Acme Global Services LLC
Project Type: Website Localization
Source Language: English
Target Languages: Arabic, French, German
Total Words: 12,450
Estimated Delivery: 5 business days

Embedded dummy image: office/site visual

Sample Processing Table

Item	Input	Output	Status
1	PDF scan	Text extraction	Pending
2	Image block	Image detection	Pending
3	Numbers	Data validation	Pending

Quality note: A good extraction engine should recognize the title, metadata, field labels, table content, and this final paragraph. It should not confuse the image caption with the table, and it should return the number 12,450 exactly as written.
